

To whom it may concern,

I heard of Clarifai for the first time yesterday when Lambert Wixson came to speak at my school, The Cooper Union. Lambert's talk regarding image recognition and a method of analyzing the output of a hidden layer in a neural network caught my attention and so I decided to learn more about Clarifai. The fact that Clarifai is successfully using machine learning algorithms to provide solutions in such a wide variety of fields is remarkable and due to this I would like to be considered for Clarifai's internship program.

While I am most interested in the machine learning algorithms and so would love to be as involved with the applied machine learning team as possible, I believe I would contribute to Clarifai more efficiently as part of the infrastructure team due to my experience with languages such as C++ and python. My experience with C++ especially includes both my coding based classes including data structures and algorithms as well as hobby coding the Cryptopals Crypto Challenges in my free time.

I realize I am late in applying and therefore am grateful for your time and consideration for the internship program.

Sincerely,

Guy Bar Yosef
